Applicant is advised that this is a restriction and not an election of species. Amendment of the claims to delete non-elected subject matter is required prior to allowance.

The inventions are distinct, each from the other because of the following reasons:

The inventions of group I, II, and III are patentably distinct from each other because they are drawn to different structures having different functions. The conjugate of group I is composed of a polypeptide and a non-polypeptide moiety. The polypeptide of group II does not contain the non-polypeptide moiety of group I, thus giving it a different structure. The nucleic acid of group III is composed of deoxyribonucleotides linked by phosphodiester bonds and

Art Unit: 1654

assumes the form of a double helix. Consequently, the structures of each invention are different and patentably distinct.

The inventions of groups IV and V are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP 806.04, MPEP808.01). In the instant application, the different inventions have different effects. The invention of group IV is a method of producing the conjugate, while the invention of group V is a method of treatment using a form of the conjugate. Consequently, the inventions are patentably distinct due to their different effects.

Upon election of an invention from groups I-V above, applicant must further elect a patentably distinct sequence. **This is not an election of species.** Nucleotide sequences encoding different proteins are structurally distinct chemical compounds and are unrelated to one another. Polypeptide sequences are also structurally distinct compounds and are unrelated to one another. These sequences are thus deemed to normally constitute independent and distinct inventions within the meaning of 35 U.S.C. 121. Absent evidence to the contrary, each such nucleotide and polypeptide sequence are presumed to represent an independent and distinct invention, subject to restriction requirement pursuant to 35 UCS 121 and 37 CFR 1.141.

Should applicant traverse on the ground that the sequences are not patentably distinct, applicant should submit or identify such evidence now of record showing the sequences to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the prior invention.

Art Unit: 1654

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Because the restriction/ election requirement is complex, a telephone call to applicant's attorney to request an oral election was not made. See MPEP 812.01.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirements be traversed. See 37 CFR 1.143.
